

28

Part 1 (15 minutes)

Listening

You will hear the pilot Kate Gingsford talking about the last few days of her flight around the world in a small aeroplane. For each question 1–6 choose the correct answer. You will hear the recording twice.

1. In Norway, Kate's friends helped her  
a) plan the route on the map.  
b) cook a meal before her flight.  
c) put on the clothes she would fly in. +
2. During the flight to Denmark, Kate  
a) felt very tired.  
b) spoke to her son.  
c) enjoyed views of the sea. +
3. On Monday, Kate was worried because  
a) she had to land unexpectedly.  
b) the plane was difficult to fly.  
c) a wheel was not working properly. +
4. While staying at her friends' farm, Kate  
a) enjoyed hearing the birds sing.  
b) got annoyed about losing flying time.  
c) made sure she got some extra sleep. +
5. Kate had to arrive at the flying club in England  
a) during the afternoon.  
b) while the weather was good.  
c) before it got dark. +
6. When she arrived in London, Kate was ...  
a) pleased she had done the trip.  
b) keen to make another long trip.  
c) nervous about seeing her family again. +

Transfer your answers to the answer sheet!

Part 2 (20 minutes)

Reading

Read the text and questions below. For each question 7–11 mark the correct letter a, b, c or d.

Laughter is the best medicine

Every week, Dr Doppit goes round the wards at the children's hospital. But instead of a white coat and a stethoscope, Dr Doppit has a red nose and carries balloons. She is the hospital's "clown doctor" and her real name is Hilary Day.

After studying drama at university, Hilary saw an advert for a clown doctor at the hospital. "The job was perfect for me," she says. "My mother and grandmother were both nurses, so caring for people is in my blood. Also, I love doing children's theatre."

Before she started, Hilary did four weeks training, where she learnt how to do magic tricks and make balloons into funny shapes. She also had to study child psychology and basic medicine.

Her visits to the hospital start with a meeting with the nursing staff to find out which patients a visit will be most useful for. Most children are delighted to see a clown, but there are some who are too ill, or afraid of clowns. Hilary always checks first. Then she does some magic, makes balloon animals or tells them a story.

"We know that laughing can have a positive effect on a person's health," says Hilary. "It produces chemicals in the brain that make you relax and feel better." Everyone agrees that regular visits from Dr Doppit can make a big difference to a child's recovery. "Children in hospital miss their everyday life at home and at school," says one hospital manager. "As well as possibly being frightened and homesick they are often bored. The clown doctor gives them something to look forward to and happy memories to take home afterwards."

7. What is the writer's aim in this text?  
a) to describe a typical day in a children's hospital  
b) to explain a method of helping young patients  
c) to encourage doctors to learn some circus skills  
d) to show students how to get a job in a hospital
8. Why was Hilary particularly suitable for the job of clown doctor?  
a) She had studied medicine at university.  
b) She already knew how to do magic.  
c) She enjoyed working with children.  
d) She had been a nurse in a hospital.

Task 2

Read the article and title *a-f* each paragraph 12–16. There is one title you do NOT need to use.

- a) Saving sea resources
- b) Distant operating
- c) No kitchen
- d) Replacing meat
- e) New eating habits
- f) More veggies

What's cooking?

**c** (12) Tomorrow's children will eat differently from their parents. Many modern homes don't have a dining room because the occupants usually eat meals in front of the television. In the future, families eating together at home will be an unusual event. Food will be heated in a microwave. If there is a cooker, it will be on a dining table rather than in the kitchen.

**b** (13) The kitchen of the future will be intelligent! Thanks to automation, it may be possible to call home on a mobile to start a cooking programme. There is nothing better than to come home after a long working day to see your dinner ready. With such a kitchen you can easily organize a party for your friends.

**a** (14) In the future, fewer Europeans will eat meat because they think that other foods are better for their health. In addition, farmers will realise that growing crops is a more efficient use of land than raising cattle. "Every time a person gives up eating beef," says food expert Brian Ford, "three thousand square metres of land are freed for crop production."

**f** (15) But meat is a major source of protein. How will we get the protein we need without meat? The answer is: from plant sources. Mushrooms and other fungi will be specially grown, fortified with vitamins and artificially flavoured. Artificial flavouring will become widespread.

**d** (16) According to Ford, fish will always be popular. "Fish, especially oily fish, have much to contribute to the diet of the future. The problem is that we are catching too many fish. We need to reestablish sanctuaries – "national parks" – in the oceans where fish are free to multiply."

Transfer your answers into the answer sheet!

9. Before Hilary starts, the stuff tell her which children  
a) have asked to see her. **+**  
b) are going to leave the hospital soon.  
c) want to hear a particular story.  
d) will benefit most from her visit. **+**

10. The hospital manager thinks that Dr Doppit's visits  
a) are useful if the parents can't visit. **-**  
b) help children get better more quickly.  
c) might be frightening for some children.  
d) help the children forget they stay in hospital. **+**

11. Dr Doppit can influence  
a) parents' behavior. **+**  
b) nurses' work. **4**  
c) kids' getting better. **+**  
d) hospital manager's decisions. **-**

Part 3 (20 minutes)

Use of English

Task 1

Read the text about a stuntman (a person who performs dangerous tricks in films) and choose the best word (a, b, c or d) for each space 17–31.

The Fall Guy

Nick Gillard earns a (0) C working as a stuntman on films and TV shows but his first (17) B of show business was trick-riding circus horses when he was just 12 years old. Four years later he got the chance to (18) A in his first film. "I really enjoyed working on the film," Nick remembers, "so I started asking what I should (19) D to become a stuntman." Nick couldn't just (20) C as a stuntman straight away. First he had to be (21) B by the British Stunt Register, which represents stunt professionals in Britain. To do this he had to reach instructor (22) A in six sports including skiing, riding and gymnastics. Since qualifying (23) A, the age of 19, Nick has worked on many movies and has doubled for some of the biggest stars in Hollywood.

Safety and timing are all important for stunt professionals — they plan everything down to the (24) A detail. "We take the utmost (25) C. It's not like being an actor where you can (26) B the shot again if it goes wrong. It's got to work first time." Nick has (27) B some terrifyingly dangerous stunts. For one film he jumped across a bridge in a speed boat, and in *Allen 3* he was (28) A on fire, without air, for more than two minutes. Filming on location takes him all (29) A the world, often for months (30) B a time.

0	a	b	c	d
	reward	wage	living	payment

27	made	done	led	given
28	put	caught	set	hit
29	about	through	across	over
30	at	on	for	in

5

Task 2

Read the text about experiences related to travelling by air and put the verbs in brackets 31–40 into the correct tense.

Flying high!

I was going on my first really important business trip. My flight (to schedule) (31) was scheduled for 9 am and I had got up extra early to ensure that I got to the airport on time. While I (to walk up) (32) was walking up to the check-in desk, I took a quick look in my briefcase to make sure that I had my laptop and all the papers I (to need) (33) needed for my presentation. Everything was there. I gave the girl at the desk my ticket and she (to hand) (34) handed me my boarding card. I had lots of time, so I decided to get something to eat. I went through passport control and (to find) (35) found a little cafeteria in the departure area. I ordered my meal and began talking to a lady who (to sit) (36) was sitting at the table beside me. She told me that she was also going on a business trip. Time passed quickly and soon my flight (to announce) (37) announced I made my way to the boarding gate and joined the queue. I opened my briefcase to get my boarding card, and suddenly realized that I (to take) (38) had taken the wrong case! Just then, I heard someone calling my name, "We (to mix up) (39) mixed up our cases!" I turned around and saw the lady from the cafeteria waving my briefcase. I exchanged cases with her and boarded my plane. As I took my seat, all I could think of was, "All is well that (to end) (40) ends well!"

Part 4 (20 minutes)

Writing

Libraries aren't very popular with modern teens. Write a short article into your local newspaper expressing your opinion.

Remember to mention:

- why and where libraries appeared;
- if you and your friends go to the school library or any;
- what modern libraries offer to their visitors;
- what the future of libraries is;
- conclude your article with an appeal to your readers.

Write no more than 120–150 words.

6

## Libraries

As we know, libraries is the places where people can take <sup>any</sup> ~~the~~ book they like. Libraries appeared because people needed to be clever, and know many facts about world and other things. First libraries <sup>appeared</sup> in western europe (because this part of the world was <sup>the</sup> most developed). <sup>148</sup>

If I go to the library with my friends, I ~~choosed~~ <sup>will</sup> choose the books about <sup>149</sup> history, music, high scores. And my friends will choose books about utopia or dystopia.

robot

Modern libraries offer many good things ~~for~~ to their visitors. For example comfortable places for reading; big amount of books of any genre the visitors likes. <sup>124</sup>

Future libraries will be more comfortable than now, the <sup>design</sup> ~~interior~~ of libraries will be beautiful. There will be robots that helps us to choose books. Also there will be <sup>a</sup> catalogue of books. <sup>124</sup>

Today we should go to the libraries, because this is ideal way, to find a book you might like! <sup>149</sup>

Part 2 (30 minutes)

Reading

Read the passage below and answer questions 1–10.

The Green House Effect

(A) Saving the world begins at home. The energy we use to power our daily domestic lives and drive our cars produces almost half of our output of carbon dioxide, the gas which is the main contributor to the problem of global warming. The way in which we use energy is not only polluting but also incredibly wasteful. But there is nothing to stop us greatly reducing our energy consumption and creating a more comfortable world.

(B) Redesigning the home to bring our lifestyles more into balance with what the environment can cope with need not involve expensive or painful changes. Most of the technology to make the changes is already available. When the changes have been made, the home of the future will be a better place to live in. So what will it be like?

(C) We will have switched from 'fossil fuels' – coal, gas and oil – to sources of power which are non-polluting such as windmills or using the power of tides. Houses will be heavily insulated and heating systems made much more efficient. In addition, our future homes will use low-energy light bulbs.

(D) With water costs rising enormously, most houses will trap rainwater and store it in a large, well-insulated tank in the cellar. This tank also serves to save energy: heat is recycled from other parts of the house to maintain a high water temperature for washing and central heating.

(E) Recycling waste will be much more common than it is today. Tins, bottles, plastic, and paper will be put into vents in the wall from where they will fall into divided bins for collection. All vegetable matter will go straight on to a compost heap in the garden.

(F) The home will be a cleaner place. Air conditioning will do much more than keep you cool. It will improve air quality by filtering out contaminating dust mites and by controlling moisture and condensation.

(G) Outside the home as well, life will have become more pleasant. The car will no longer be the threat to our health that it is today: it will run on hydrogen or a mixture of battery and safer petrol. It won't be allowed to clog up our cities: people will use the train, a clean, fast, and quiet form of city transport which many cities are already reintroducing.

(H) This picture of the future is one which should appeal to all of us. It's one that our grandchildren could take for granted, not believing that people lived any other way, that people went around polluting, destroying, wasting resources, and apparently not caring. But if we want our grandchildren to have a world which is cleaner and safer,

we have to start to change our ways. The picture of the future can become a reality but only if we do something about it. And we should do something about it soon.

**Questions 1–4.**  
Below you will find four headings. Each heading describes the contents of one of the paragraphs in the passage. However, since there are eight paragraphs and only four headings, four of the paragraphs will not fit any of the headings below. Write the letter you need to choose which heading best describes which paragraph. Write the letter of a paragraph next to the number of the heading 1–4 on the separate answer sheet.

- F 1. Homes of the future will be more hygienic.
- W 2. We ought to change the way we live.
- A 3. The way we live now damages the world.
- C 4. Future energy needs will be lower and not cause pollution.

**Questions 5–10.**  
Choose option A, B, C or D which best answers the question. Circle the correct letter in boxes 5–10 on your answer sheet.

- 5. The author's intention in writing the above article was to show...  
 A. the sort of future we can expect for our grandchildren.  
 B. why we should reduce pollution and use energy more efficiently.  
 C. why we have taken steps to reduce pollution, and improve our use of energy.  
 D. how changes in house design will encourage people to use less polluting energy.
- 6. Which of the following statements is the author most likely to agree with?  
 A. In the future, houses will be much healthier.  
 B. In the future, people will produce much less waste.  
 C. In the future, very few people will own their own car.  
 D. In the future, the problem of global warming will be better understood.
- 7. In the passage the author explains...  
 A. why using less energy has become more popular.  
 B. why sources of energy are going to become more scarce.  
 C. how savings could be made in the way energy is used.  
 D. how, unless we use less energy, energy costs will rise.
- 8. In the passage the author DOES NOT explain...  
 A. how our cities could be made cleaner.  
 B. why our use of energy needs to change.  
 C. why water costs will rise in the future.  
 D. how the way we live produces global warming.

9. According to the author, one of the differences between our way of life and that of people in the future might be that...

- A. cars will be much cheaper to maintain.
  - B. fewer people will travel in the cities.
  - C. cars will have far more safety features.
  - D. cars will be used less than they are today.
10. The passage describes the homes of the future. Such homes, according to the author, might NOT be built if we...

- A. could not afford the necessary technology.
- B. could not find alternative sources of energy.
- C. were unable to reduce the amount of waste we produce.
- D. failed to agree to make necessary changes in our lives.

Part 4 (30 minutes)  
Writing

Comment on the following problem:

**Elderly people who live alone should be taken care of.**

In your comment use the information from the article below.

Elderly people who live alone can be monitored by new technology that analyses household sounds to ensure their safety.

The new sound monitoring system, developed by Fujitsu, the Japanese electronics company, examines noises in homes via a microphone connected to a data centre. The technology is refined enough to differentiate between the sound of a falling object or a collapsing human and can instantly alert family members or security firms if any abnormality is detected.

From breathing and coughing to sleeping, all noises made by the resident can be detected by the technology, in addition to analysis of daily routines, heat and humidity levels.

Write 100–120 words.

Remember to

- make an introduction,
- express your personal opinion on the problem and give reasons for your opinion,
- express your attitude towards the information from the article,
- make a conclusion.

Write in your own words.

25 + 8 = 33

Nowadays elderly people live alone ~~th~~ without anyone to talk to. It is very sad to see how old people walk around parks on their own. I think that all people should take care of their relatives, get together and spend time. But it happens to be that not all families can keep in touch.

Fortunately, technology has been developing and now elderly people can be monitored by a new technology that analyses household sounds to ensure their safety. I think that this system is a very good idea to look after older people that we don't see very often. Despite all the advantages of this system, I think that we should sometimes visit our relatives. And make them feel like they are not alone.

Comment on the following problem:  
**Elderly people who live alone should be taken care of.**

In your comment use the information from the article below.

Elderly people who live alone can be monitored by new technology that analyses household sounds to ensure their safety.  
The new sound monitoring system, developed by Fujitsu, the Japanese electronics company, examines noises in homes via a microphone connected to a data centre. The technology is refined enough to differentiate between the sound of a falling object or a collapsing human and can instantly alert family members or security firms if any abnormality is detected.  
From breathing and coughing to sleeping, all noises made by the resident can be detected by the technology, in addition to analysis of daily routines, heat and humidity levels.

Elderly people who live alone should be monitored by

new Japanese technology, which can analyse all sounds in house.

I think, that elderly people should be taken under control. Young generation should care about their comfort and safety.

Firstly, elderly people have a weak health. Unfortunately, young generation often cannot care about elderly people, because of busy life. If elderly people can not help themselves, this system can alert family members. It can save their lives.

Secondly, this system can detect noises between the sounds of falling object or a collapsing human.

It means that this system will alert, when any emergency situation.

In conclusion, I want to say that it is a good idea to use system like that because young people can not worry about their parents. Elderly people must be under control. 134
